IN offering the present Volume to the consideration of his brother Surveyors, the Author would simply remark, that it owes its existence to his own felt want of such à compilation.

Whilst occupied on the Government Survey of Victoria, the inadequacy for practical purposes of the existing pablished Computations forced itself so strongly upon him, that he resolved, notwithstanding the pressure of professional engagements, to prepare a set of Traverse Tables which should more nearly answer both his own requirements and those of his colleagues-a determination which has resulted in the publication of the ensuing pages.

The Distinctive Features of these Tables, and the method of their employment, may be briefly summarised as follows :-

1. The Tables are calculated to Single Minutes and to 100 of Distance.

1I. The Traverses are given to four places of decimals, so that the Sines and Cosines for a distance of twelve miles can be ascertained correctly to within half an inch.
III. The angles o to $45^{\circ}$ are given at the top of the page, and $45^{\circ}$ to $90^{\circ}$ at the foot; the distances 1 to 100 are in the outside columns; and the quantity sought is found at the intersection of the column containing the required angle and the line on which is the required distance.
IV. The whole numbers are given in the two centre columns only, and from these the decimal quantities increase towards the edge of the page, the Sines increasing to the right, and the Cosines to the left. When the whole number changes in the line, attention is directed to it by a black diamond; therefore, when a black diamond is found, it is to be understood that it signifies a cipher, and that the whole numbers on the same line must be increased by one. The simplicity of this plan has so many advantares, that, in the Author's opinion, it more than counterbalances the commoner one of repeating the whole numbers at the outside of the page as well as in the centre.
(vi)
V. In the following Table, the whole of the figures required to be written for the finding of Sines and Cosines are shown in a circuit of twelve lines:-

The angles sought in the Tables are those under the hend "Reduced Bearing."
For the first line, opening the Tables at $89^{\circ} 44^{\prime}$ :

the results are carried into the S . and E. columns.
In the next line, the book is opened at $63^{\circ} 27$, and for Distance $4^{\circ} 60 \mathrm{chs}$. The Cosine and Sine are found at once, and copied into the N . and E. columns.
In the third line, the book is opened at $16^{\circ} 28^{\circ}$, and at a Distance 100:
the Cosine and Sine copied,
tben for 22 ks ., .
and these being added up,
958.99 and 283.46
$21 \cdot 10$
6.24
289.70
the results are carried into the N. and E. columns.
The trifing calculation required is shown in full in the columns "Latitude" and "Departure," that for each line being comprised in one page of the book
VI. The great advantage of these Traverse Tables over Logarithms-both as regards simplicity and economy of labour in calculating-will be seen at a glance from the following comparative Table:-

CALCULATIONS REQUIRED FOR FINDING SINES AND COSINES.
By TRAVERSE TABLES.
By LOGARITHMS.

|  |  |  |
| :---: | :---: | :---: |
| $63^{\circ} 27^{\prime}-4600$ links. | $2056.10-411491$ <br> One opening of Traverse Tables. No calculation required. | 3.3130446 <br> (a) The logarithm book has to be opened in four different places. <br> (b.) Two separate additions have to be made. <br> (c.) In taking out natura: numbers, proportional parts have to be resorted to, in order to find figures of second decimal place. <br> (有.) Besides the calculations, 48 more figures have to be written in doing the work by Logarithms than by Traverse Tables. |
| $26^{\circ} 29^{\prime}-9987$ links. | One opening of Traverse Tables only required. <br> In column $26^{\circ} 29^{\prime}$ the Sin. and Cos. for 99 are first found, then in the same column the Sin. and Cos. for 87 ; these added together give the result. | A calculation similar to that given above is necessitated by Logarithms. |

In conclusion, the Author would express a hope that these Tables-compiled in the first instance, as already indicated, for private use-will be found helpful by all engaged in active practice, whether as Surveyors or as Engineers, not only in these Colonies, but in every part of the world where Traverse Tables are employed. No pains have been spared to ensure accuracy-the Tables exhibiting results arrived at by two different methods of computation pursued independently by the Author and assistants ; and the utmost care has been bestowed upon the work during its progress through the Press-the Proof-sheets having in every instance been corrected by the writer, notwithstanding the fact that some thousands of miles intervene between himself and the Publishers. Finallv, before publication, as a last precaution, the Tables were recomputed a third time, and the whole work was subjected to a rigid and most careful revision, leaving it, as the Author thinks himself justified in believing, absolutely free from error.

R. L. GURDEN,<br>Kfring, Victoria.
